

### Abstract of the Disclosure

A knockdown furniture assembly includes a frame releasably connected to two arm pieces. Each arm piece has a bottom rail having two carriage bolts extending outward therefrom for positioning in the frame. The bolts are held in place on the arm pieces and the frame by washer and nut assemblies. The washer and nut assemblies are countersunk in the rails to allow for a flush connection between the rails and the frame. The arm pieces can be easily disassembled from the frame by disengaging the washer and nut assemblies and removing the frame from off of the bolts.
